

SparkSphere Air

Gen 2

2-in-1 Wireless Bluetooth Transmitter & Receiver

WHAT IT DOES

SparkSphere Air is a pocket-sized adapter that turns any 3.5 mm audio device into a wireless one. Flip a single hardware switch to send audio out (TX) — for example, from an in-flight TV or gym treadmill to your wireless headphones — or to receive audio in (RX) and play it through any wired speaker, car AUX, or home stereo. One device replaces both a Bluetooth transmitter and a Bluetooth receiver in a buyer's catalog.

TWO MODES, ONE DEVICE

T

TX — Transmit

Plugs into any 3.5 mm audio source and sends sound to wireless headphones or speakers.

In-flight entertainment, gym equipment, older TVs, gaming consoles.

R

RX — Receive

Pairs with a phone or laptop and plays the audio through any wired speaker, AUX input, or stereo.

Car AUX, home hi-fi, powered desk speakers, boomboxes.

KEY FEATURES

- Bluetooth 5.0 wireless with low-latency audio
- Operating range up to 30 ft / 10 m line of sight
- Built-in 120 mAh rechargeable battery, USB-C charging
- Universal 3.5 mm jack — works with anything that has an aux port
- Hands-free calling with built-in microphone
- Physical TX/RX slider — no app, no menus, no setup

WHY WHOLESALERS LOVE IT

- One SKU replaces two in your catalog (transmitter + receiver), simplifying inventory.
- Broad use-case fit (travel, fitness, automotive, home audio) means strong sell-through.
- Aggressive starting price unlocks healthy margin at competitive retail.
